INTRODUCTION

Dear excited trader,

Thank you for downloading your copy of:

"Quick Guide to MetaTrader 5 –
HOW TO GUIDE: Trading Chart Platform".

You are about to read a complete and illustrated GUIDE on how to sign up and use the MetaTrader 5 platform with ease.

The broker we'll be using to gain access to MetaTrader 5 is our No. 1 Recommended Forex broker

QuickTrade

When you're done reading this quick guide, make sure you sign up with them using this link by clicking here for the best rates…

Trade well, live free.

Timon Rossolimos
Founder, ***MATI Trader***

Elevator Pitch

What *QuickTrade* is

QuickTrade (est. 2014) is a Licensed Financial Services and a Licensed Over-The-Counter Derivates Provider with FSP License Number 45262. They are an award-winning and leading Financial Markets Broker who offer CFD trading for:

- Currencies (Forex)
- Indices
- Commodities
- Certain US stocks

Access on all devices

QuickTrade currently provides over 50,000 traders with fast and flexible access to trade these markets through MetaTrader 5 charting, analysis and trading platform used by thousands of brokers and millions of traders world-wide. MT5 runs on all Windows, IOS, Android, desktop and mobile devices.

Educational content variety

There is also a web version. Publications like the Sunday Times and MoneyWeb have written about *QuickTrade* and its education partner Stock Market College (biggest stock market educational college in Africa). They offer various courses, seminars and events to +500 new aspiring traders each month.

Opportunities

What *QuickTrade* offers you

QuickTrade has a similar trading philosophy to MATI Trader…

To offer fast, secure and easy information to trading well.

Most important, they offer a number of services to their clients at zero charge including:

- Demo and Live trading accounts
- **The MetaTrader 5 trading platform**
- Easy and quick funding methods
- Withdrawals within 3 hours (during business hours)
- **FREE training on how to use MetaTrader 5**
- FREE access to a community of traders in a Live Trading Room
- FREE trading signals for clients with funded Live trading accounts
- A dedicated Service Manager is assigned to you
- FREE Live chat available at all times to you

MetaTrader 5

What is it?

Right, so once you've opened an account with QuickTrade, we'll need to download the MetaTrader 5 trading and charting platform.

If you've never used MT before, here's a bit of information.

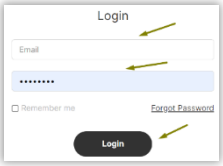
MetaTrader 5 is a multi-asset charting and trading platform that offers superior features and tools for comprehensive price analysis and trading applications to a community of more than 7,000,000 traders.

With MetaTrader 5 you'll find access to:

- ✓ 38+ pre-installed technical indicators
- ✓ 44 analytical charting tools
- ✓ 3 chart types
- ✓ 21-time frames
- ✓ Detachable charts
- ✓ 1-click trading from charts
- ✓ Trailing stop losses
- ✓ Fully customizable charts
- ✓ Easy user-interface
- ✓ Available for Windows or Mac

Quick Steps to Download MetaTrader 5

Step #1:
[Click here](#) sign up with *QuickTrade.*



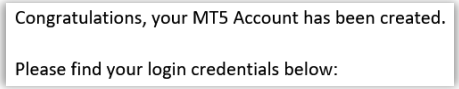
Step #2:
Log in to the Client Portal.

Step #3:
Scroll down until you see 'Downloads'.

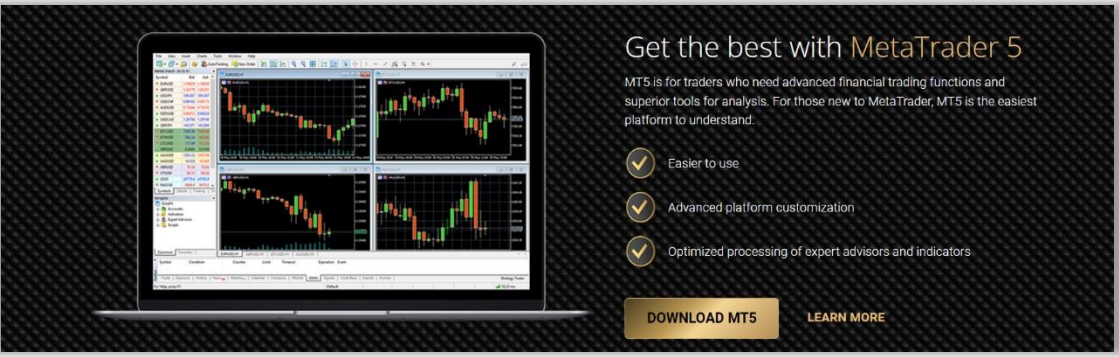
Step #4:
Choose to download from the following options:

- ✓ MT5 Windows Link
- ✓ MT5 iOS Link
- ✓ MT5 Android link
- ✓ MT5 for Mac OS Link

Step #4:
Follow the steps and check your email for your login details.



Step #5:
Double click the *QuickTrade MT5 Terminal*, log into your account and fill in your login details.



MetaTrader 5

Basic Chart Setup

Once you're up and running, you'll then need to customise your charts and trading platform. Think of it as your trading work station.

Choose your Chart Type

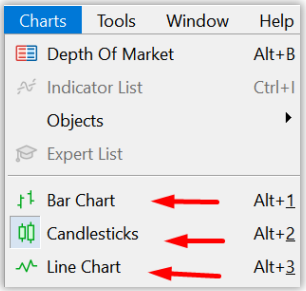
The first step is to simply choose your chart type.

When your MetaTrader 5 platform opens, you'll find there are three price types you can choose.

- ✓ Bar chart
- ✓ Candle
- ✓ Line chart

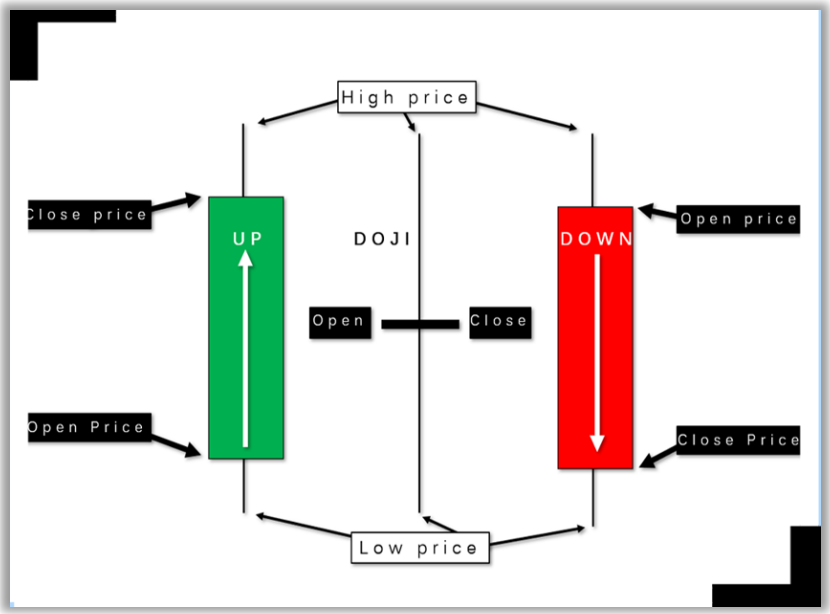
It should look like this…

The second way to choose the Chart Type is by going to Charts and choosing the chart type there…



As I usually analyse and trade using Candlestick charts, we'll look at candles throughout this guide.

Candlesticks, unlike line and bar charts, reveal the most information on a chart.



How to setup your Chart Layout on MetaTrader 5

Once you have chosen your chart type, you can then choose your color scheme.

I'm talking about the Chart Layout.

This is where you'll customise your color scheme…

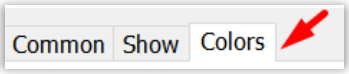
I personally prefer light colors as they are easy on the eyes.

But you can choose whether you want a light, dark, neon or even multi color charting interface.

To change the layout of your charts you'll follow these simple steps.

Step #1:
Right click on any chart and click 'Properties'.

Step #2:
Click 'Colors'.



Step #3:
Choose the colors for each chart item.
To see my layout, see below.

How to create your Watch List

Just to jog your memory.

A market watch-list is a quote board that shows you all the available currencies, stocks, indices and commodities you can trade.

In this way, you can view whatever markets you'd like to monitor and keep track of on a daily basis to trade with.

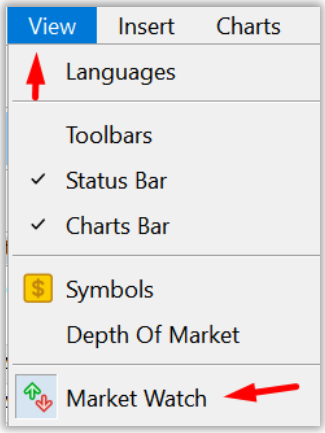
Here are three steps to view and analyse your watch list.

3 Steps to set up your watch list with MetaTrader

Step #1:
Open the market watch list board

When you log onto your MetaTrader 5 platform, you should see your watch list board on the left side of your MetaTrader platform.

If there is no watch list, then simply click on **view** and in the drop-down list press Market Watch.

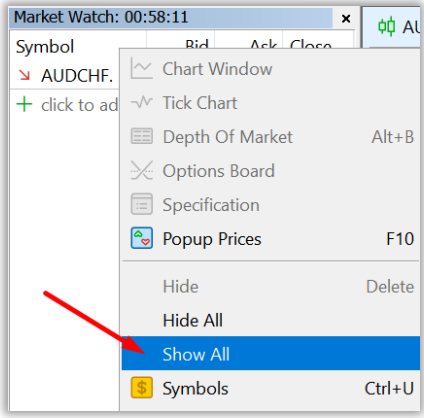


Step #2:
Show all markets available to trade

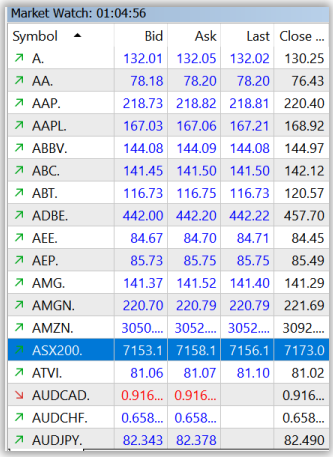
The easiest next step is to see all the markets that are available to trade.

To do this you'll right-click anywhere in the Market Watch board and click 'Show All'.

BEFORE: Show All



AFTER: Show All



Symbol	Bid	Ask	Last	Close ...
A.	132.01	132.05	132.02	130.25
AA.	78.18	78.20	78.20	76.43
AAP.	218.73	218.82	218.81	220.40
AAPL.	167.03	167.06	167.21	168.92
ABBV.	144.08	144.09	144.08	144.97
ABC.	141.45	141.50	141.50	142.12
ABT.	116.73	116.75	116.73	120.57
ADBE.	442.00	442.20	442.22	457.70
AEE.	84.67	84.70	84.71	84.45
AEP.	85.73	85.75	85.75	85.49
AMG.	141.37	141.52	141.40	141.29
AMGN.	220.70	220.79	220.79	221.69
AMZN.	3050....	3052....	3052....	3092....
ASX200.	7153.1	7158.1	7156.1	7173.0
ATVI.	81.06	81.07	81.10	81.02
AUDCAD.	0.916...	0.916...		0.916...
AUDCHF.	0.658...	0.658...		0.658...
AUDJPY.	82.343	82.378		82.490

Step #3:
Choose what you wish to see in each column

I'm sure there are a number of different details you'd like to see with each market.

Maybe you want to see the high and low price, the spread between the Bid and Ask price or even the last closing price. You can choose the items you wish on the Market Watch board.

Once again, you'll right-click anywhere on the Market Watch board. Scroll down until you see columns and choose your picks.

Now you have everything you need to know to open your watch list board and to start trading all the markets without having to search for each individual market ticker.

Choose your Time Frames

Our charts are set up and we are nearly ready to trade.

First, we'll choose the time frame we're going to look at with MetaTrader 5.

A time frame basically shows you the market activity during a selected period.

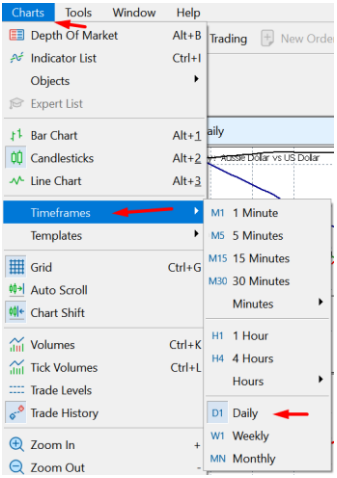
You can choose to view periods from one second, five minutes, 4-hour, daily, weekly etc…

There are two main ways to choose your time frame on MetaTrader 5.

#1: On the dashboard, there are different time frame options to choose from including:

M1 – 1 Minute
M5 – 5 Minutes
M15 – 15 Minutes
M30 – 30 Minutes
H1 – 1 Hour
H4 – 4 Hours
D1 – Daily
W1 – Weekly
MN – Monthly

#2: In the menu, you can choose a time frame by going to Charts – Timeframes and choosing the time frame you wish.



Place your Indicators

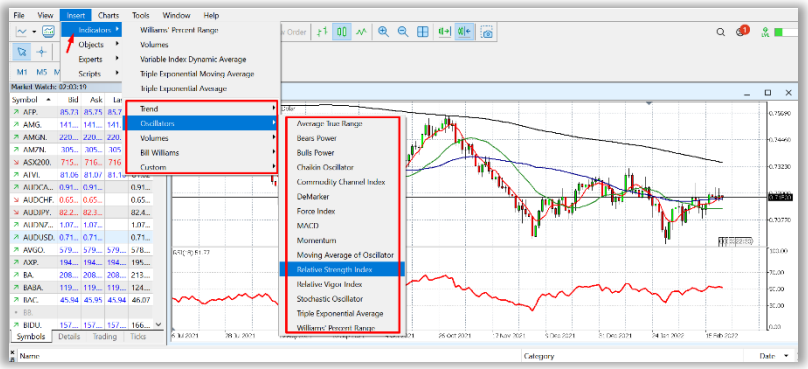
There is a large variety of indicators and oscillators you can choose from.

You can customise them, color them and even shape them as you wish.

To access the indicators, you'll simply follow this one step.

#1: In the menu press 'Insert' – 'Indicators' and choose from the variety.

See below…



NOTE With each indicator, you can right-click directly on the indicator in the chart and click 'Properties' or head over to the entire 'Indicator Table' or 'Delete' the indicator. For example…

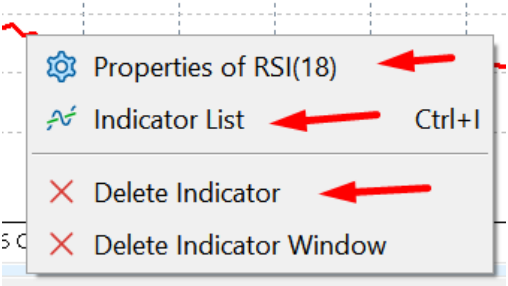


Chart your analysis with ease

When it comes to price action or seeing trends, divergences, or just general supports and resistances, we need to be able to personalise our charts, draw and place objects on a chart.

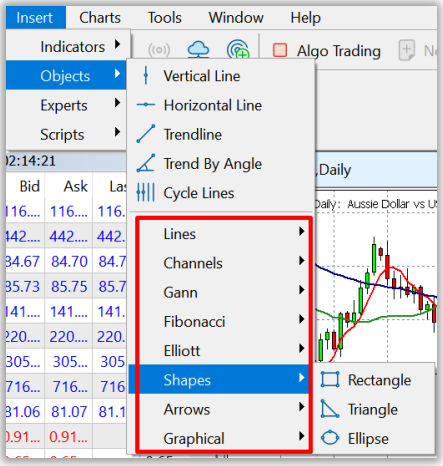
With MetaTrader 5, you'll see there are default options to add objects on a chart including:

- ✓ Draw vertical line
- ✓ Draw Horizontal line
- ✓ Draw trendline
- ✓ Draw equidistant channels
- ✓ Draw Fibonacci retracement
- ✓ Extra icons

It should look something like this…

If you want more options, you'll head over to the menu and click Insert – Objects.

There are a greater variety of objects you can choose from to draw on your chart…



How to place a trade with MetaTrader 5

The whole point of trading is not just for monitoring and analysing charts.

You need to actually know how to buy (go long) and sell (go short) a trade.

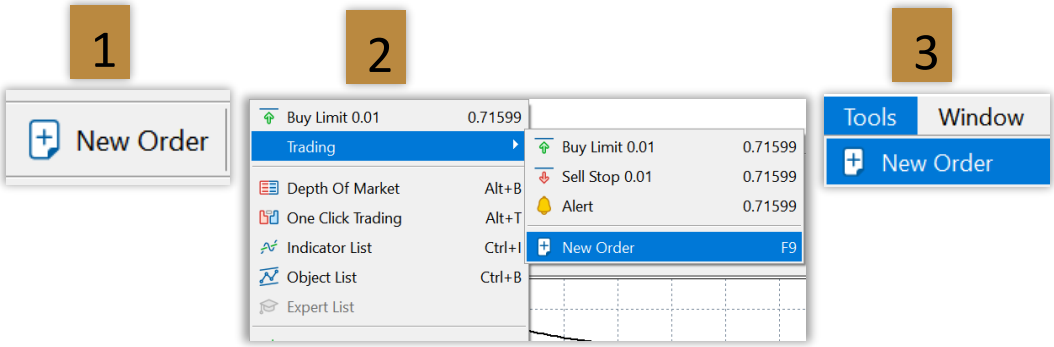
What is a New Order?

In MetaTrader 5, a 'New Order' is the button you'll use to action (buy or sell) a trade.

There are a few ways to access the "New Order" button.

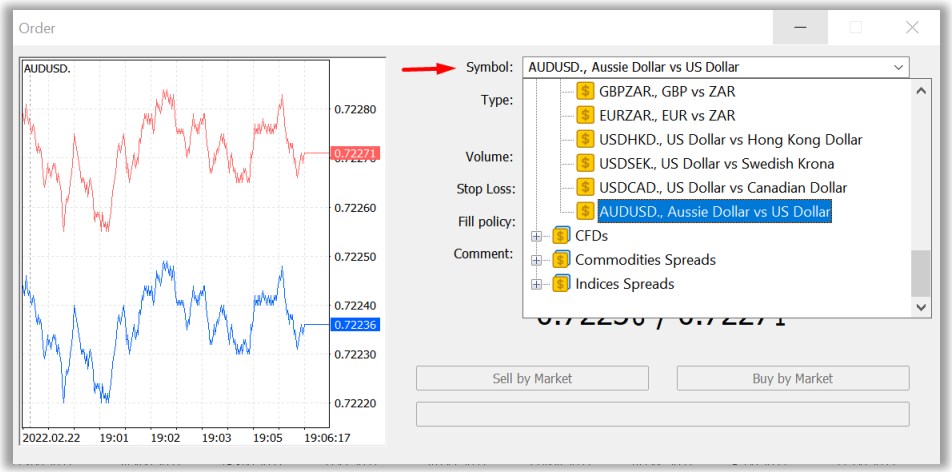
I'll show you three quick ones.

1. In the MetaTrader 5 Dashboard near the middle
2. Right-click on the market you wish to trade in your 'Market Watch'
3. Click on Tools and the first item in the drop-down list



As soon as the 'New Order' window has opened, there are four steps you'll need to execute your trade.

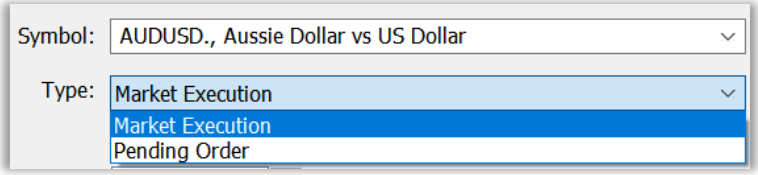
Step #1: Choose the market you want to trade



At the top of the window, you'll see 'Symbol'. Click on it and a drop-down list will show you the available markets to trade.

Look for and click on the market you want to trade.

Step #2: Choose the entry market order type



There are two options you can choose to buy or sell, in order to enter into a trade.

1. **Market Execution** – where you can buy at the price the market is trading at.

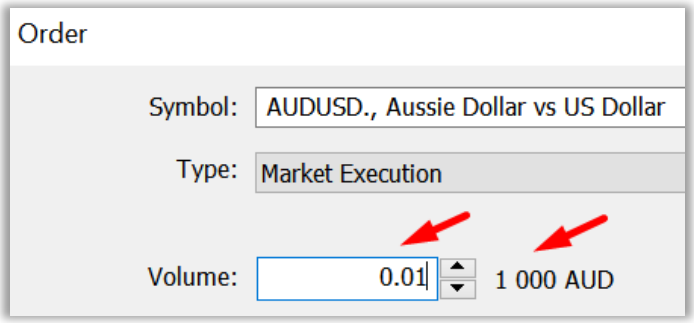
2. **Pending Order** – You can choose the price you'd like the market to reach before getting into your trade through buy and sell limit/stops.

I'll just use Market Execution and click on 'Buy by Market' for simplicity purposes.

Choose and click on either Market Execution or Pending Order.

NOTE: I'll explain more about these Market Orders in the next part of the guide.

Step #4: Calculate your trade size (Volume)



Volume with MetaTrader is another term for "Value Per Point".

For a stock, index, or commodity if you choose 0.10 means, every 1 cent the market moves for or against your favour, you'll lose or gain 10 cents.

Where it says volume, is where you'll type in the value.

For example, with Forex you'll trade lots.

To buy / sell **1 Micro lot** (1,000 units) you'll type in **0.01.**

To buy / sell **1 Mini lot** (10,000 units) you'll type in **0.1.**

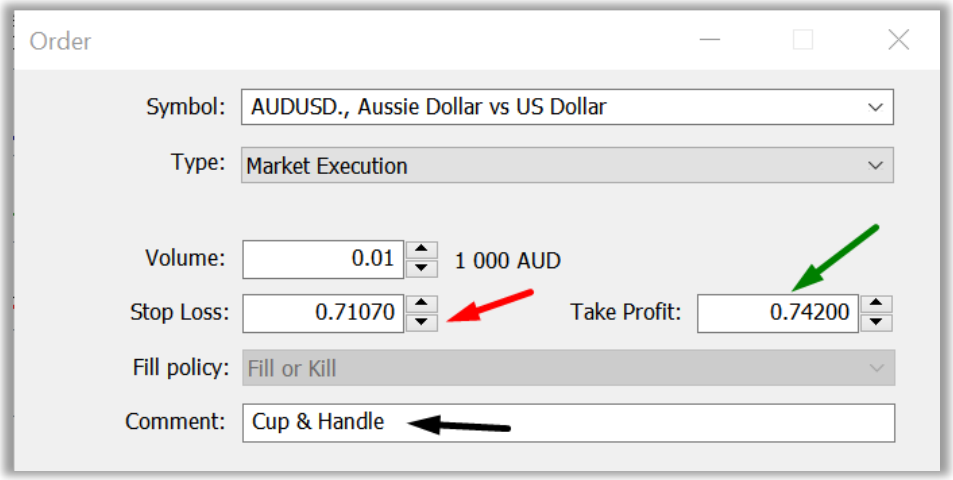
To buy / sell **1 Standard lot** (100,000 units), you'll type in **1.00.**

NOTE: I always buy in Micro lots no matter what portfolio I have. This way I can measure and monitor my risk with accuracy.

Once you've chosen your trade volume size, you'll need to fill in the rest of your trading levels…

Choosing your 'Volume" is subjective to the size of your portfolio… So, make sure you know how to calculate the % risk per trade.

Step #5: Place your stop loss and take profit



Then according to your strategy or according to my MATI Trader System (62.5% win rate, 5 breakout patterns, 3 rule) strategy choose the price level where you'll place your **stop loss (for your risk)** and the price level for your take profit (for your reward).

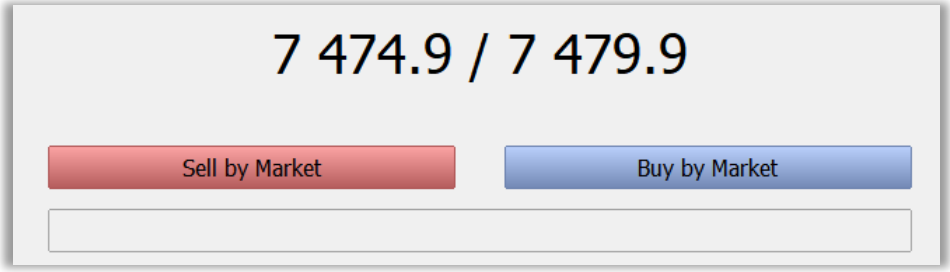
While you're at it, feel free to **comment with a reason** for your trade entry (long or short).

#6: EXECUTE: Buy or Sell

For Market Execution (Best market price entry):

Once all your trading levels are in and you've calculated your trading size, you may either click

Sell by Market (to go short) or **Buy by Market (to go long)**



For Pending Orders (Chosen price to buy or sell)

Once all your trading levels are in and you've calculated your trading size, you may either click

Place.

You're done!

On the chart, you'll see that the trading levels will be automatically populated on the chart for you to keep track and adjust the levels as needed.

Come back to this part of the guide for every time you take a trade. Eventually, it will become second nature to your everyday routine.

Let's look at those different Market Types I promised to show you…

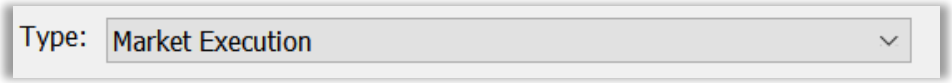
5 Market Orders you can take

With MetaTrader 5, there are five different options to choose from when you execute a trade (entry).

I'm going to simplify these five trading entry orders in a way that you'll never forget.

NOTE: To clarify the information below, I have created an illustrated table which you can use for reference in the future.

Entry order #1: Market Execution

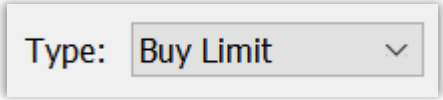


The first entry order is the easiest to understand.

This is where you'll buy or sell at the best current market price.

When you choose a market order, it is the quickest, most effective, and easiest way to enter into your trade at the current bid (buy) or offer (sell).

Entry Order #2: BUY Limit



When you place a 'Buy Limit Order', you'll place your long (buy) trade entry price BELOW where the current price is trading at.

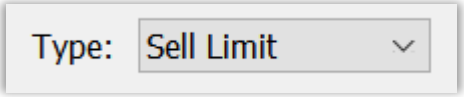
Once the market price drops on or below the Buy Limit Order price, you will automatically be entered into your trade.

EXAMPLE: BUY Limit

If the Australian Dollar VS the US Dollar (AUD/USD) is currently trading at 0.7190 and you would like to buy (go long) at 0.7150, you'll choose the Buy Limit Order.

You'll then wait for the market price to drop to your chosen order price or below it where you'll then automatically be entered into your 'long' trade.

Entry Order #3: SELL Limit



When you place a 'Sell Limit Order', you'll place your short (sell) trade entry price ABOVE where the current price is trading at.

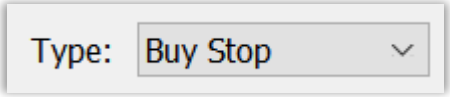
Once the market price hits this entry point or above it, you will automatically be entered into your trade.

EXAMPLE: SELL Limit

If AUD/USD is currently trading at 0.7150 and you would like to sell (go short) at 0.7190, you'll choose the Sell Limit Order.

You'll then wait for the market price to rise to or above your chosen order price, where you'll then automatically be entered into your 'short' trade.

Entry Order #4: BUY Stop



When you place a 'Buy Stop Order', you'll place your long (buy) trade entry price ABOVE where the current price is trading at.

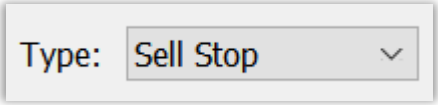
Once the market price hits this entry point or above it, you will automatically be entered into your trade.

EXAMPLE: BUY Stop

If AUD/USD is currently trading at 0.7150 and you would like to buy (go long) at 0.7190, you'll choose the Buy Stop Order.

You'll then wait for the market price to rise to or above your chosen order price, where you'll then automatically be entered into your 'long' trade.

Entry Order #5: SELL Stop



When you place a 'Sell Stop Order', you'll place your short trade entry price BELOW where the current price is trading at.

Once the market price drops on or below the Sell Stop Order price, you will automatically be entered into your trade.

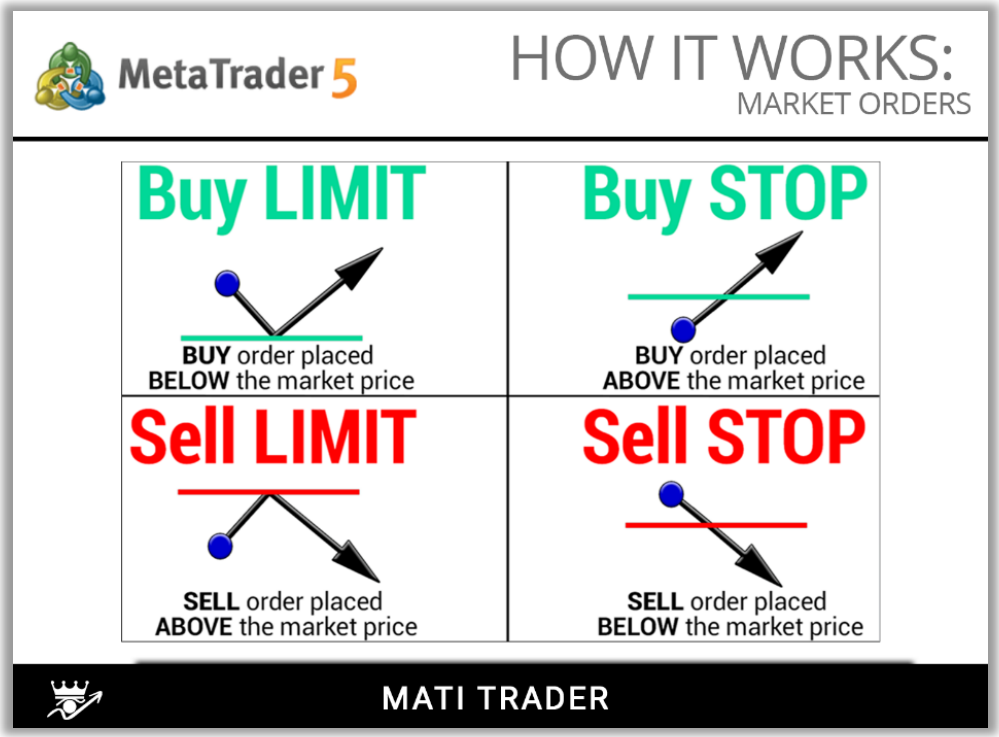
EXAMPLE: SELL Stop

If AUD/USD is currently trading at 0.7190 and you would like to sell (go short) at 0.7150, you'll choose the Sell Stop Order.

You'll then wait for the market price to drop to your chosen order price or below it where you'll then automatically be entered into your 'short' trade.'

To sum up the four main buy and sell limit orders, I've created a table for you. Print it, laminate it and stick it on your wall.

This way you'll never forget how these market entry orders work.



EXTRA Features with MetaTrader 5

It doesn't stop there.

MetaTrader 5 has ongoing new features which you can explore and learn from.

Each day, you might even find something new to add to your trading.

It provides you with opportunities to enjoy features like:

- ✓ Advanced Expert Advisory services
- ✓ Automated trading signals
- ✓ Alerts
- ✓ Daily articles written by experts and other traders
- ✓ Trade account, history and exposure
- ✓ Save the chart display as a picture
- ✓ Open a variety of windows and charts at a time
- ✓ Multiple Time frame and indicator analyses
- ✓ Fundamental analysis
- ✓ Overlaying chart indicators and other markets
- ✓ And the list goes on…

I trust you have enjoyed the introduction to MetaTrader 5 and now you have some ideas on how to run it successfully with your trading…

Let's carry on with how *QuickTrade* will work well with MATI Trader…

QuickTrade & MATI Trader

How it will work

As you may know, I have run trader services for over a decade.

One trader service that I run through my company is called the Premium MATI Trader Service.

Just a recap:

What is it?

The Premium MATI Trader Service is an

online email and video service to help

anyone profit on the go with live

trading alerts from – both local and international –

stocks, indices, Forex and crypto-currencies using a two-decade old proven and profitable breakout trading strategy called

The MATI Trader System.

How are trades chosen?

WITH AN
18 year, low risk breakout trading strategy

TRADING A VARIETY OF MARKETS INCLUDING:
Local and international stocks, indices, currencies and cryptos

MATI TRADER SYSTEM INCORPORATES:
A 2 Decade old Mechanical strategy – no guess work

A profit rule that has kept the win/rate +62.5%

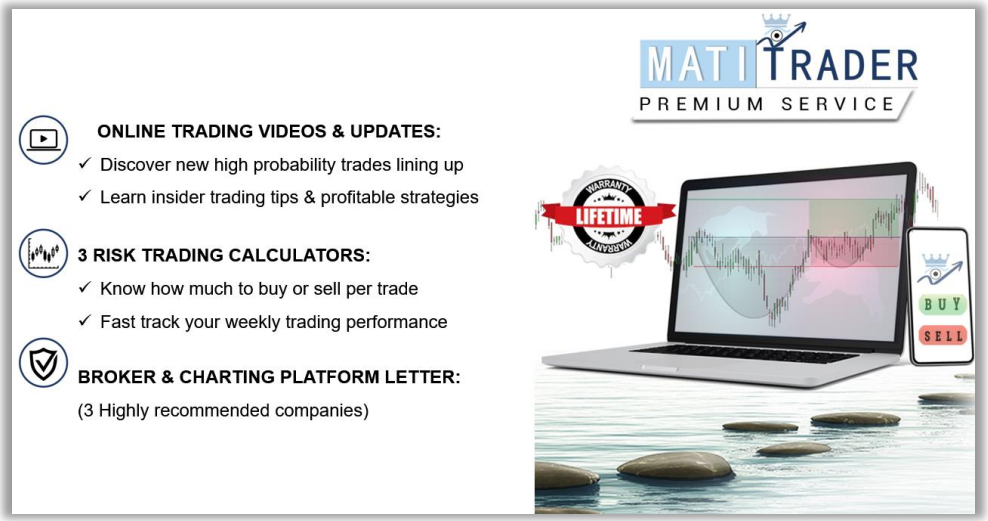
A highly risk averse method

ALSO NOTE:

I have provided trader services for the past +10 years.

Mentored and trained over 250,000 traders.

What will I get?



How Premium MATI Trader works in 5 steps

HERE'S WHERE IT GETS EXCITING

With

QuickTrade & Premium MATI

Why you need to OPEN an account with

QuickTrade for the Premium MATI Trader Service

I have always professed that it's important to have two accounts when it comes to trading.

One for stocks, commodities and crypto currencies.

And

The second account is for Forex and indices.

You might ask why and it's a valid question.

Through my 20+ years of being in the markets, I've realised that trading these two sets of markets, they work differently and it is a different ball game.

With Forex I look at 4-hour charts while the other markets I look at daily.

And you'll find the portfolio results and trading performances are different.

I for one, not only have two trading accounts for these two sets of markets but also two different trading journals that have different stats, calculators and metrics.

You can expect many more Forex and index trades from the ***Premium MATI Trader Service*** as well as different journals and calculators.

Many of my members have been asking for a service with Forex trades, and finally I have found a broker which I'll be recommending to my members.

You'll see the chart setups through MetaTrader 5 as well as the expected trade sizes and calculations relative to the portfolio.

Why am I doing this?

- ✓ **The Full trading experience**
  I want you to have the FULL trading experience with all financial markets with the ***Premium MATI Trader Service.***

- ✓ **Accelerate our trading results**
  With *QuickTrade* available to us, we will now have the opportunity to accelerate our trading performance with Forex and index trading.

- ✓ **Adapt to your trading personality**
  You might even find that you'll learn more about trading and how to grow your account through new financial markets.

The next Forex trade is looming and you have everything to gain, by enjoying the profitable world of Forex trading with *QuickTrade*.

I am excited to partner up with *QuickTrade* and to share more trading opportunities, videos, lessons, calculators, and trade ideas starting today.

FINAL WORDS:

I trust this '*Quick Guide to MetaTrader 5'* book will help you level up your trading skills, profits and success.

Print this guide and use it until you get used to and feel comfortable using the platform with all of its features during your experience with the *Premium MATI Trader Service.*

Remember, to sign up with *QuickTrade* using this link for the best rates and so we can get this Forex ball rolling with the ***Premium MATI Trader Service.***

Click here to sign up to QuickTrade now…
